

PROACTIVE RELEASE December 2022

GOV-015769 Data related to COVID-19 vaccinations

The treatment injury data provided was extracted on 12 December 2022 and includes claims lodged between 18 February 2021, when New Zealand began COVID vaccinations, and 10 December 2022, where the treatment event was *vaccination* or *injection/medications, adverse reaction/medication error* and where the medication type was recorded as *vaccine*.

However, as these fields are only completed when cover for the claim is decided, the figures provided have been supplemented by a text search of the claim forms received by ACC which mention *Comirnaty* (the name of the Pfizer-BioNTech COVID-19 vaccine), *AstraZeneca, Novavax,* or included the terms *covid* or *Pfizer* together with *vacc* or *injection.* This text search allows us to identify claims that have been lodged but where cover has not been decided. Free text search methods are not reliable data extraction methods and can result in anomalies in the data; so claims identified by this method above have been manually reviewed and some false positive matches removed.

During this period ACC has received 3,326 claims for injuries relating to the Covid vaccination. 1,349 claims have been accepted, 1,833 have been declined and 144 are yet to be decided. The following tables break down these numbers by the sex, age and ethnicity of the claimants.

Comirnaty had until very recently been the only Covid vaccine that has been used as part of New Zealand's vaccination response but more recently the Astra Zeneca and Novavax Covid-19 vaccines have also been used. The specific vaccine used is not always identified on the claim so identifying the vaccine used cannot be reliably determined. Given the vaccination policy, the vast majority of the claims reported below relate to the Pfizer-BioNTech Comirnaty vaccine.

Claim lodgement rates

Claim lodgement rates are dependent on several factors. They can be influenced by:

- population demography i.e. the characteristics of the resident population, visitors and referred patients
- health status of the population treated
- what level of facility the organisation provides i.e. tertiary versus secondary
- familiarity of health providers or clients in recognising and/or lodging treatment injury claims.

Privacy

ACC does not routinely disclose low value numbers related to claims. Accordingly, some of the values in the tables only indicate that the number is less than 4 (denoted as <4). In other instances, values are supressed and notated as (--) to limit the potential for particular individuals or matters specific to certain individuals from being identified.

Withholding in this way is necessary to protect the privacy of these individuals under section 9(2)(a) of the Act. In doing so, we have considered the public interest in making the information available and have determined that it does not outweigh the need to protect the privacy of these persons.

Dose

ACC has asked lodging providers to indicate whether the vaccination leading to the claim was a first, second or third/booster dose. Whilst 52% have provided this information, it has been provided as free text and nearly 50% of claims do not clarify which dose was involved. The table below categorises the claims received based on whether the claim was for the first, second or third primary/booster dose or whether this wasn't clear from the description given.

Dose	Accepted	Declined	Pending Decision	Total
First	154	294	18	466
Second	362	470	28	860
Third Primary/Booster	149	232	31	412
Unspecified	684	837	67	1,588
Total	1,349	1,833	144	3,326

Accepted Injuries

Treatment injuries are confirmed and recorded when a claim is decided. The following table shows the primary injury recorded for the accepted Covid vaccination claims decided by 20 August 2022.

Primary injury	Accepted Claims
Allergic Reaction	196
Sprain	156
Cardiac injury	152
Contusion	130
Adverse Drug Reaction	102
Anaphylactic Reaction	86
Infection	64
Cellulitis	46
Bursitis	30
Nerve Damage	24
Other	363
Total	1,349

Declined Reason

The table below shows the number of declined claims, broken down by declined reasons, which relate to the treatment injury assessment criteria.

Declined Reason	Number of Declined Claims
No Injury	1,364
No Causal Link	258
Withdrawn	84
Lack of Information	44
Ordinary Consequence of Treatment	16
Other	67
Total	1,833

Severity of Injuries

Measuring the impact of an injury on a person is challenging. ACC and others use the overall cost of a treatment injury claim as an indicator of the severity of the injury because more costly claims are likely to indicate claims where there has been a more severe impact on the person injured. While not always directly related, overall cost is one measure of severity and impact.

The following table shows the number of accepted claims grouped by the total payments made per claim to 12 December 2022.

Payments to 22 August 2022	Number of Accepted Claims
No payment to date	214
Up to \$100	351
Over \$100 to \$500	424
Over \$500 to \$1,000	108
Over \$1,000 to \$5,000	135
Over \$5,000 to \$10,000	33
Over \$10,000	84
Total	1,349

Total payments made by ACC by 22 August 2022 on these 1,349 accepted claims was \$3,864,895. 360 out of 1,349 accepted claims had resulted in payments of over \$500 by 12 December 2022. 214 accepted claims had yet to receive a payment by 12 December 2022.

To date, 4 claims have been lodged with ACC which have related to a fatal injury.

<u>Ethnicity</u>

The ethnicity data provided is based on ACC's 'prioritised ethnicity' data field. This method reduces the six ethnic responses to a single response by a system of "prioritisation" where: Māori regardless of other ethnicities listed is classified as Māori; Pacific peoples with any other response other than Māori is classified as Pacific; Asian peoples with any other response other than Māori and Pacific are classified as Asian; Other ethnicity regardless of any other response other than Māori, Asian or Pacific is classified as Other. Those that listed European and did not list Māori, Pacific, Asian or Other are classified as European.

Ethnicity	Accepted	Declined	Pending Decision	Total
Māori	120	156	13	289
Pacific Peoples	48	72	9	129
Asian	120	164	8	292
European	948	1,285	99	2,332
Other	113	156	15	284
Total	1,349	1,833	144	3,326

70% of claims lodged with ACC for Covid vaccination injuries have been for clients with European ethnicity with 70% accepted for cover. Māori comprise 9% of claims lodged with ACC for Covid vaccination injuries and 9% of the claims accepted.

ACC reports ethnicity using a different method to Statistics New Zealand. Care must be taken when comparing ACC's ethnicity data with other Government agencies or census data.

Age Band

Age Band	Accepted	Declined	Pending Decision	Total
5-11	10		0	
12-17	43	45	4	92
18-24	98	123	5	226
25-29	87	138	12	237
30-34	117	169	6	292
35-39	121	174	8	303
40-44	128	191	17	336
45-49	163	206	22	391
50-54	128	222	22	372
55-59	136	164	10	310
60-64	99	134	12	245
65-69	100	100	8	208
70-74	46	75	13	134
75-79	33	39		
80 plus and unknown	40		<4	81
Total	1,349	1,833	144	3,326

<u>Sex</u>

Sex	Accepted	Declined	Pending Decision	Total
Female	906	1,180	88	2,174
Male	443	653	56	1,152
Total	1,349	1,833	144	3,326

The table above shows that females are far more likely than males to have lodged a claim for a Covid vaccination treatment injury. Claims for female clients represent 65% of claims lodged. This compares to 50% of the population with at least one Covid vaccination.¹

Claims by Month

The following table shows the number of Covid vaccination injury claims received by ACC by month. This is grouped by the recorded accident date ('Number of Claimed Vaccinations' column in table below) and by the date on which the claim was lodged with ACC ('Number Lodged' column in table below). ACC records treatment injury accident dates as the date on which the client first sought treatment for the injury. This may not necessarily be the date on which the event leading to the injury occurred although for the purpose of the analysis this date is used as a proxy for the date of vaccination.

Few vaccinations and consequently vaccination claims were lodged in the month of February 2021, so February and March have been grouped together to avoid reporting small numbers. Likewise, November and December have been grouped together.

Month	Number of Claimed Vaccinations	Number Lodged
February - March 2021 ¹	15	5
April 2021	71	21

<u>DHB</u>

The DHB has been provided below based on the DHB of Treatment where this has been identified and by the DHB of Residence of the client. Given that the number of claims received from some DHBs is quite small only the total number of claims lodged has been shown in the table below.

District Health Board Region	DHB of Treatment	DHB of Residence
Auckland	320	255
Bay of Plenty	98	175
Canterbury	176	375
Capital & Coast	119	192
Counties Manukau	48	275
Hawkes Bay	51	92
Hutt Valley	49	100
Lakes	28	61
Mid Central	71	119
Nelson Marlborough	68	130
Northland	64	100
South Canterbury	38	32
Southern	184	350
Tairawhiti	13	24
Taranaki	85	133
Waikato	212	391
Wairarapa	19	29
Waitemata	102	384
West Coast		23

District Health Board Region	DHB of Treatment	DHB of Residence
Whanganui	48	81
Overseas	<4	0
Unknown	1,521	5
Total	3,326	3,326

Time to Lodgement

Some vaccination injuries are immediately apparent whereas other injuries may take some time to become apparent. The table below shows the time between the accident date (assumed to be the date of vaccination in most cases) and the date when the claim is lodged with ACC.

Delay	Number of Claims	Delay	Number of Claims
0 days	117	21 days	32
1 days	147	22 days	25
2 days	128	23 days	18
3 days	139	24 days	32
4 days	110	25 days	19
5 days	95	26 days	15
6 days	70	27 days	18
7 days	66	4 weeks	167
8 days	53	5 weeks	116
9 days	42	6 weeks	98
10 days	42	7 weeks	94
11 days	36	8 weeks	80
12 days	40	9 weeks	67
13 days	32	10 weeks	70
14 days	34	11 weeks	74
15 days	26	12 weeks	66
16 days	30	3 months	221
17 days	25	4 months	163
18 days	27	5 months	134
19 days	26	6 months	104
20 days	32	7 months +	396

Treatment Injury

ACC has provided cover for treatment injuries since 1 July 2005, when treatment injury provisions came into law. The treatment injury provisions replaced the medical misadventure provisions of the Accident Compensation Act 2001, to bring it more in line with the no-fault nature of the scheme.

A treatment injury is a personal injury caused as a result of seeking or receiving medical treatment from, or at the direction of, a registered health professional. In order to fulfil the criteria for cover, the person must have suffered a personal injury and there must be a clear causal link between the treatment and the injury, and the injury must not be a necessary part or ordinary consequence of the treatment.

When considering treatment injury data, it is important to note that the number of claims lodged with ACC cannot be taken as an accurate indication of the occurrence of injury during treatment or the quality of care. This is because, among other reasons, not all occurrences of injury during treatment are lodged with ACC.

The ACC website contains further information on treatment injury <u>www.acc.co.nz/for-providers/treatment-safety</u>.

A full overview of treatment injury in public and private surgical hospitals and general practice settings is available at <u>www.acc.co.nz/assets/provider/ACC7971-Supporting-Treatment-Safety-2021.pdf</u>.
