

## Request for a subsequent Support Package

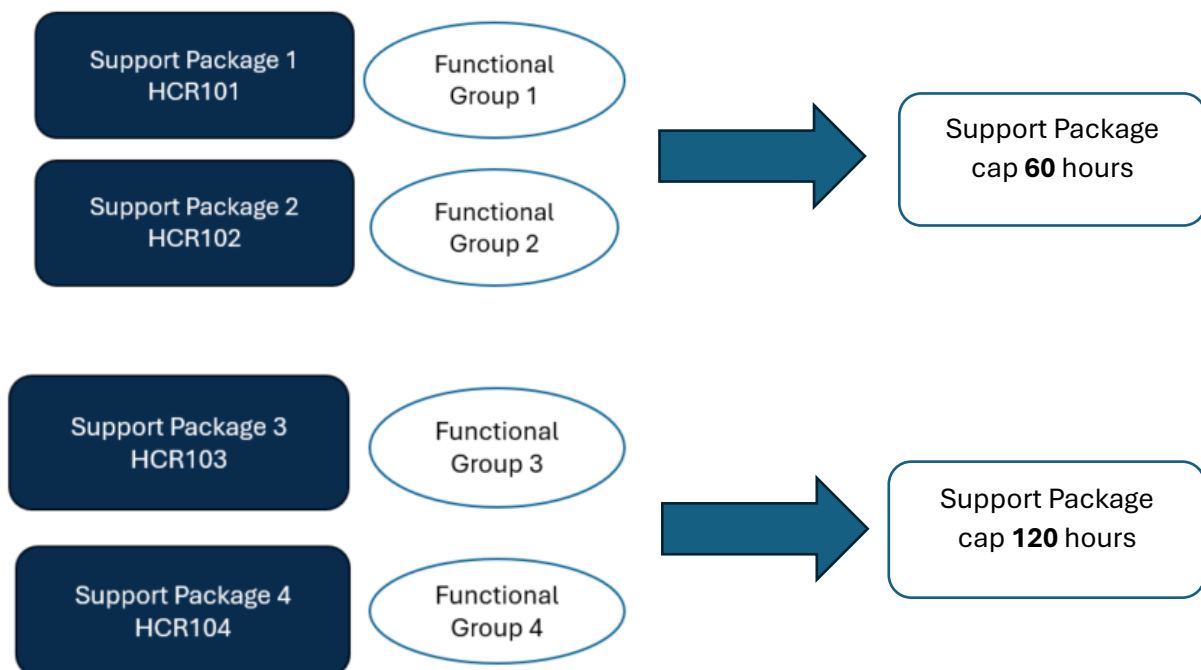

When a client requires a subsequent package for their injury-related needs, your Registered Health Professional (RHP) must fully complete the ACC8006 Clinical Update Report.

Please ensure the Clinical Update Report includes:

- Section 6
  - what functional group is currently in place
  - the total number of hours delivered to date
  - number of support packages already completed for this claim
- Section 8
  - clinical rationale on why further supports are needed due to the covered injury
  - specific goals to be achieved within the new package
  - strategies to be used to improve independence
  -

ACC will provide written approval or decline of request by email. A purchase order is not needed to invoice for a subsequent support package once you have ACC's approval, however before invoicing please ensure that:

- the existing support package cap hours **have** been reached, or
- the support package has been **in place for 6 months**.

**NOTE:** The subsequent package is to commence from the date the hours cap is reached and/or the date 6 months is reached.

**InterRAI assessment**

A further interRAI assessment is not required if the client's functional needs are improving, and the additional support package request is of the same or lower group. This can be determined by the clinical judgment of the RHP.
